Allozyme data
Genomic data
Empirical
Theory
Idealised model
Single locus, two alleles; randomly mating, diploid, infinite population; trait is fitness
Fisher(1922)
Eco-evo models of population regulation and fluctuation
Non-random mating
Haymann(1953)
Extensions to selfing plants
Extensions to haploids and sex chromosomes
Haploids and haplo-diploids
Sprott(1957)
Intragenomic conflicts
Microbial experimental evolution
Finite populations
Wright(1948)
Neutral theory
Coalescent theory
Genomic footprints
Multi-locus systems
Wright(1939)
Modifier theory
Evolutionary quantitative genetics
Traits selected toward an optimum
Wright(1935)
Adaptive dynamics
Fisher's geometric model
